Nithya Kattimani

Business Analyst | Process Optimization | Workflow Automation | Data Analysis
Email| **Phone**: 8431802311| LinkedIn| GitHub

Summary

Process-focused professional transitioning into Business Analysis with experience in workflow optimization and stakeholder collaboration. Experienced in analyzing business processes, identifying inefficiencies, and implementing automation solutions to improve operational efficiency. Skilled in stakeholder coordination, requirements understanding, and KPI-driven reporting to support data-informed decision-making.

Education

Bachelor of Engineering - Computer Science and Engineering
JSS Academy of Technical Education, Bengaluru CGPA: 8.07

Professional Experience

Technical Consultant - GreenDot Digital Jan 2026 – Present

- Conducted end-to-end analysis of the New Store Opening process to identify operational bottlenecks and inefficiencies.
- Documented As-Is workflows and designed optimized To-Be process flows to streamline cross-functional approvals using KissFlow.
- Gathered and translated business requirements from operations and finance stakeholders into structured workflow solutions.
- Defined approval hierarchies, SLAs, and process checkpoints to improve turnaround time and accountability.
- Implemented workflow automation to reduce manual coordination and enhance process visibility across teams.
- Supported user validation and process adoption by coordinating feedback and refining workflows post-implementation.

IT Dev Associate II - NTT Data Oct 2023 – Jan 2026

- Conducted gap analysis on active cloud operations workflows to identify process inefficiencies and document improvement opportunities.
- Gathered and analyzed recurring functional issues through root cause analysis, translating findings into structured process improvement recommendations for stakeholder review.
- Elicited reporting requirements from business stakeholders and developed Excel dashboards to track operational KPIs, enabling data-driven decision-making.
- Documented As-Is process flows for cloud monitoring operations and collaborated with cross-functional teams to define and implement To-Be improvements.
- Reduced manual monitoring effort by 30% by identifying automation opportunities and defining business requirements for checkpoint implementation.
- Monitored KPIs against defined SLAs and contributed to continuous improvement initiatives by recommending optimization strategies to operations leadership.

Projects

Apple Carbon Emissions Analysis Dashboard

- Built an interactive Power BI dashboard analyzing Apple's greenhouse gas emissions across fiscal years.
- Created KPI cards to track total, average, and maximum emissions and visualized emission trends over time.
- Designed charts to analyze emissions by Scope 1, Scope 2, and Scope 3, identifying major contributors.
- Developed category-level analysis to highlight the largest emission sources and their scope distribution.
- Implemented slicers and interactive visuals to enable dynamic filtering and exploratory analysis.

Biometric Authentication System (Python, OpenCV, AI Algorithms)

- Developed a fingerprint and iris recognition system achieving 95% classification accuracy.
- Implemented image pre-processing, feature extraction, and model optimization techniques.
- Improved authentication security using AI-based pattern recognition algorithms.

Technical Skills

- Business Analysis - Requirement Gathering & Documentation, Process Mapping (As-Is / To-Be), Gap Analysis, Workflow Automation, Stakeholder Collaboration, KPI & SLA Monitoring
- Data Analysis & Visualization- Microsoft Excel (Pivot Tables, Data Analysis), Power BI, Tableau, SQL
- Workflow & Enterprise Tools – Kissflow, ServiceNow, Jira, Confluence
- Programming & Technical Knowledge – Python, SQL, JavaScript, Java

Certifications

- Introduction to Data Science & AI
- Programming for Everybody - Python
- Cloud Development with HTML, CSS, and JavaScript
- Cybersecurity Basics
- SQL Basics
